Assignment 2

Hotel Reviews

Submitted by:

IT19374666

Dissanayake Adikaramge D.M.

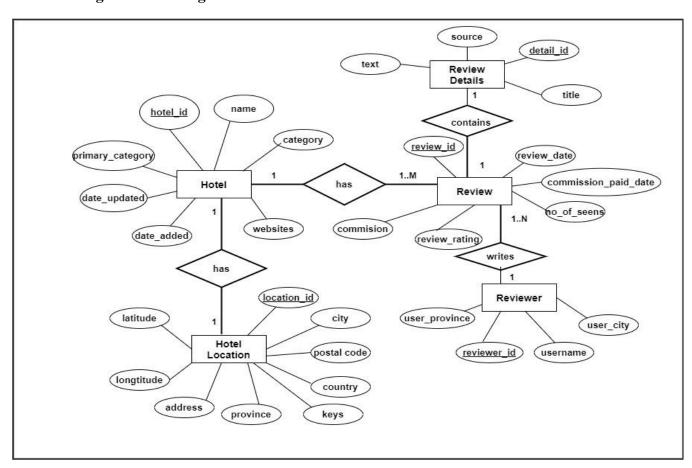

1. Data Source

I selected a hotel review data set for the assignment which includes the ratings by the reviewers, number of reviews seen of a review by the reviewees, the commission paid to the reviewer, the relevant hotel details, and the reviewer details.

This hotel review data set comprises of 10,000 records of hotel reviews over 16 years from 2002 - 2018.

The data set has hierarchies in hotel location such as country-> province -> city and in reviewer entity has user_province -> user_city hierarchy.

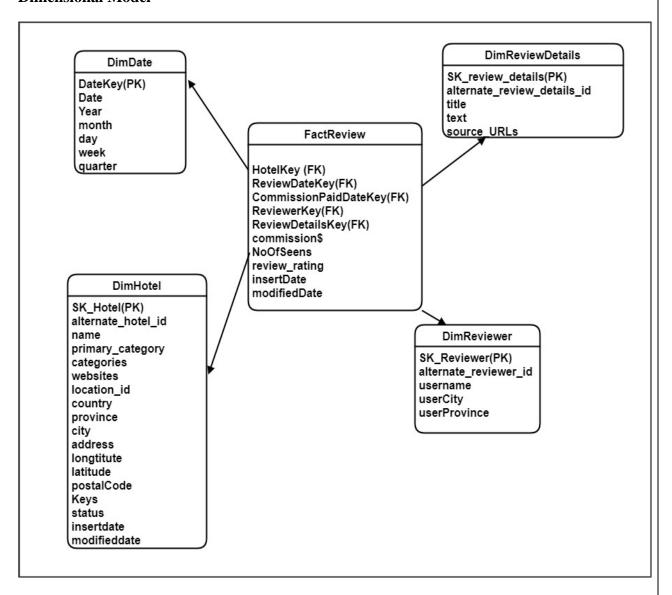

Following is the ER Diagram for the chosen data set.

Data set was downloaded from the following link:

https://www.kaggle.com/datafiniti/hotel-reviews

Dimensional Model

For the data warehouse of the review data set ,I implemented a star schema. DimHotel,DimReviewer , DimReviewDetails and DimDate are dimensions and Review is the fact table in the data warehouse.

I merged the hotel and hotel location tables as shown in the relational model above together to create a single dimension table named DimHotel as shown in the above dimensional model to develop it to a star schema.

Further I implemented the DimHotel dimension as a **slowly changing dimension**.

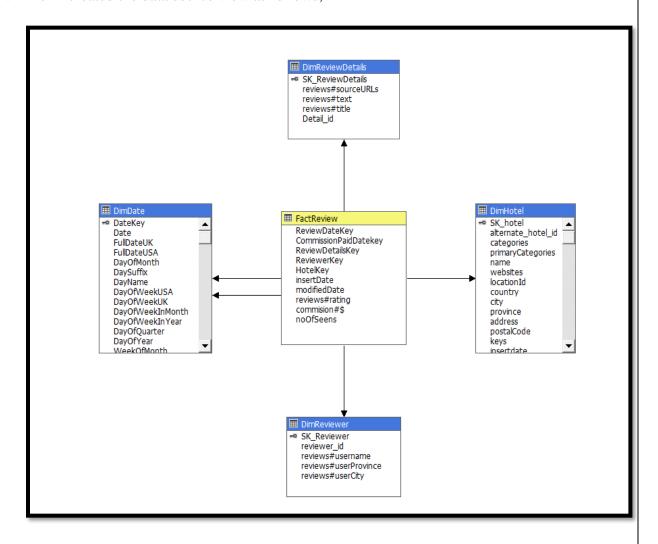

Grain: Details of a review on a specific hotel by a reviewer.

Assumptions:

I decided hotel dimension is a slowly changing dimension assuming hotel name, categories ,primary categories and location details can be changed over time.

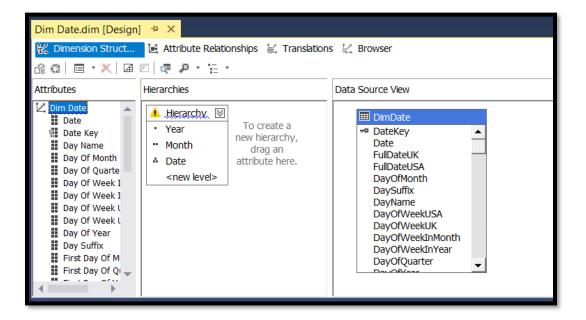

2. SSAS Cube implementation

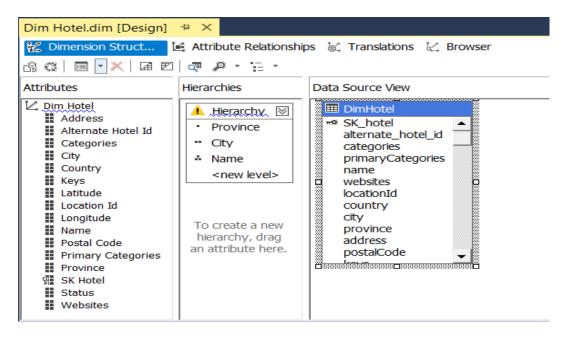

- 1. Initially I added the 'DataWarehouse_Hotel_Reviews' database as the data source in the SSIS analysis service.
- 2. Then I created the data source view as follows;

3. I created a cube for the data source using all the dimensions (DimDate, DimReviewer, DimHotel and DimReviewDetails) and FactReview as the measure group table with all the measures in the Fact table as measures.

4. Then I added a hierarchy for the DimDate as Year>Month>Date and a hierarchy for the DimHotel as Province > City >Name.

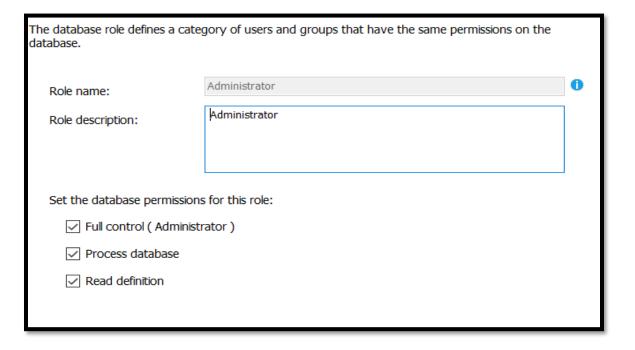

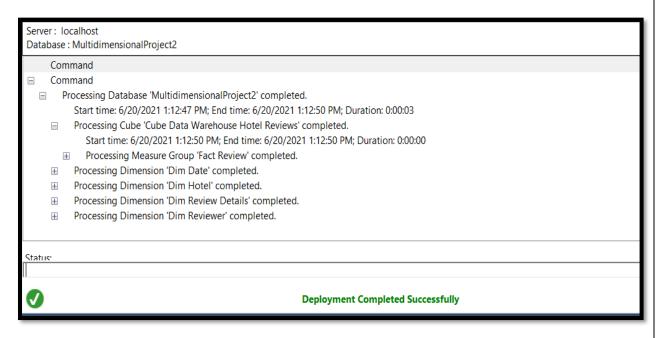

5. I created a KPI to measure the review counts to be greater than 15.

6. I created a role 'Administrator' giving all the access and permission.

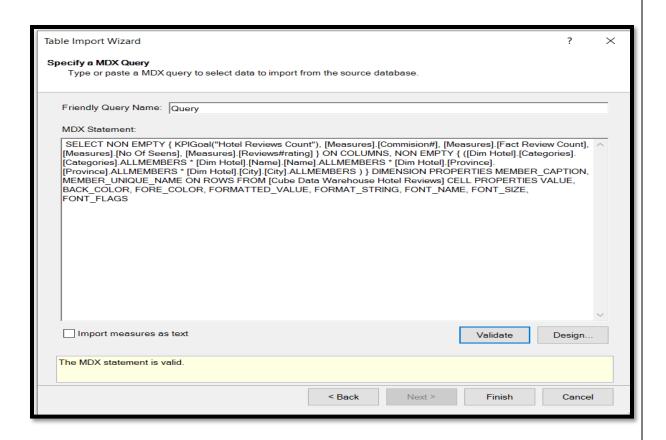

7. I deployed the cube as a SSAS database.

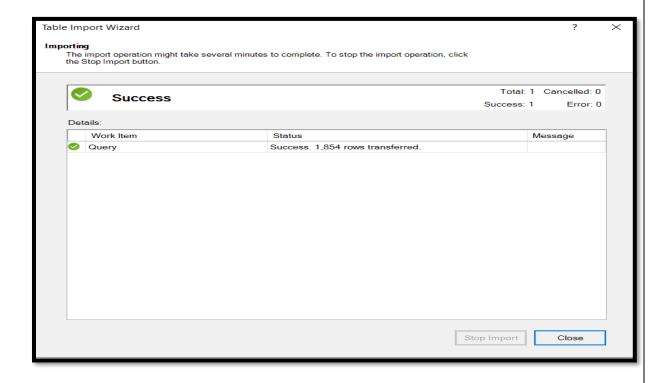

3. Demonstration of OLAP operations

1. Initially I connected Excel PowerPivot to the cube using MDX query. I used the following MDX query for the OLAP drill down and roll up operations.

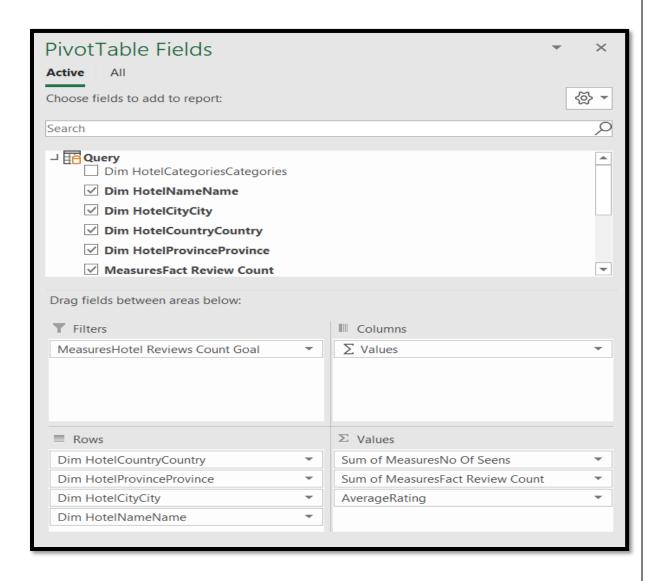

Then I successfully loaded the query data to the PowerPivot backend.

Drill down

I created an pivot Table to analyze count of views, count of reviews and average rating for Hotel where we can drill down from the Country to Province to City to Hotel.

Following is the table that created for the drill down operation.

| Row Labels | Sum of MeasuresNo Of Seens | Sum of MeasuresFact Review Count | AverageRating |
|---|----------------------------|----------------------------------|---------------|
| ⊞US | | | |
| ∃AZ | | | |
| ⊞ Phoenix | 650 | 80 | 3.8 |
| ■ Sedona | | | |
| Best Western Plus Arroyo Roble Hotel & Creekside Villas | 144 | 19 | 4.052631579 |
| ∃CA | | | |
| ⊕ Anaheim | 270 | 38 | 4.078947368 |
| ⊞ Camarillo | 175 | 24 | 4.416666667 |
| B Long Beach | | | |
| Hotel Maya - a DoubleTree by Hilton Hotel | 171 | 25 | 4.24 |
| ■ Los Angeles | | | |
| Miyako Hotel Los Angeles | 133 | 20 | 4.4675 |
| ■ Napa | | | |
| Best Western Plus Inn At The Vines | 573 | 74 | 4.148648649 |
| Hampton Inn and Suites Napa | 216 | 25 | 4.32 |
| ⊟ Pismo Beach | | | |
| Seacrest Oceanfront Hotel | 291 | 41 | 4.512195122 |
| ■ San Diego | | | |
| Best Western Seven Seas | 129 | 19 | 3.526315789 |

| InterContinental San Francisco | 241 | 30 | 4.633333333 |
| ■Santa Monica | | | |
| Shore Hotel | 292 | 32 | 4.0625 |
| ■South Lake Tahoe | | | |
| Inn by the Lake | 189 | 28 | 3.928571429 |
| ■ West Hollywood | | | |

Roll up.

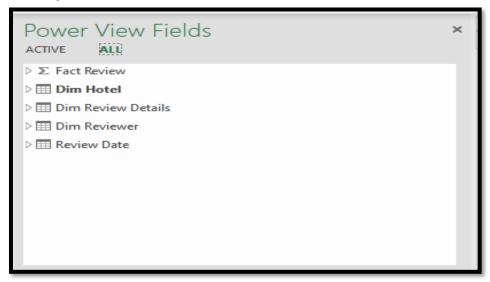

I used the above created table to perform the roll up operation for the hotel review details analysis.

| Row Labels | Sum of MeasuresNo Of Seens | Sum of MeasuresFact Review Count | AverageRating |
|-------------|----------------------------|----------------------------------|---------------|
| ⊟US | | | |
| ⊕ AZ | 794 | 99 | 3.848484848 |
| ⊕ CA | 3532 | 464 | 4.270366379 |

| ⊕ WA | 667 | 93 | 4.279569892 |
| Grand Total | 35102 | 4685 | 4.127865528 |

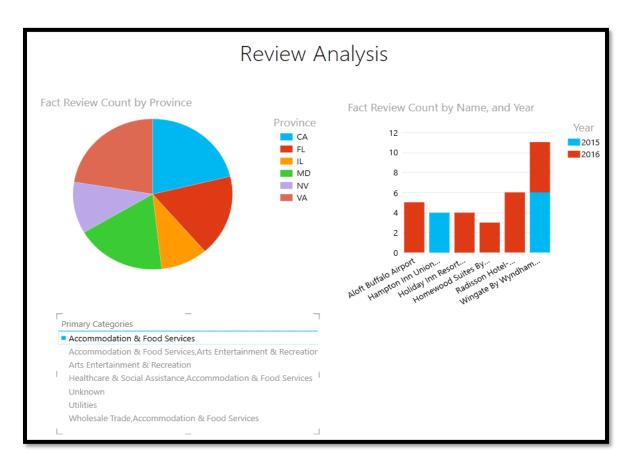

We can analyze province wise review details for hotels using above table.

Slice

1. I initially connected Excel Power View to the cube.

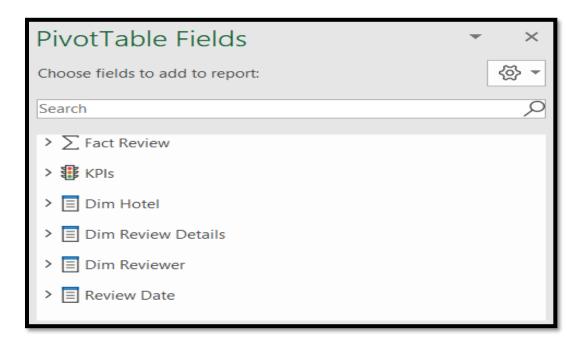

- 2. Then I added a pie chart to analyze province wise review counts and stacked bar chart to analyze hotel wise review counts for 2015 and 2016.
- 3. Finally, I added a slicer to analyze primary category wise review counts.

Dice

1. I initially connected PowerPivot to the implemented cube.

1. I used Hotel Dimension to analyze review count, view count based on the selected provinces as below and Date Dimension to analyze the same measures from year 2013-2018.

| | Columi | | | | | | | | | | | | | |
|--------------|----------|--------|------|------|------|------|----------|------|------|------|------|------|-------------------------|-------------------|

Pivot

1. From the connected cube I implemented the following pivot table. It depicts the review count and view counts based on year and province.

| Row Labels | ŢŢ | Fact Review Count | No Of Seens |
|-------------|----|-------------------|-------------|
| □ 2013 | | | |
| AK | | 3 | 37 |
| AR | | 1 | 1 |
| AZ | | 8 | 71 |
| CA | | 29 | 231 |
| co | | 2 | 15 |
| DE | | 8 | 60 |
| FL | | 8 | 60 |
| GA | | 7 | 51 |
| HI | | 13 | 99 |
| ID | | 1 | 4 |
| IL | | 12 | 98 |
| KS | | 2 | 6 |
| MA | | 1 | 1 |
| MD | | 126 | 949 |
| ME | | 1 | 3 |
| MI | | 3 | 24 |
| MO | | 6 | 43 |
| NC | | 3 | 34 |
| ND | | 1 | 1 |
| NH | | 3 | 12 |
| NJ | | 6 | 64 |
| NV | | 8 | 55 |
| NY | | 2 | 15 |
| ОН | | 3 | 30 |
| OK | | 1 | 2 |
| OR | | 3 | 13 |
| PA | | 2 | 14 |
| SC | | 22 | 162 |
| SD | | 1 | 5 |
| TX | | 2 | 8 |
| VA | | 104 | 746 |
| WA | | 2 | 26 |
| WI | | 2 | 19 |
| 2014 | | | |
| AR | | 5 | 27 |
| AZ | | 10 | 56 |
| CA | | 69 | 554 |
| CO | | 6 | 49 |
| CT | | 1 | 1 |

2. I changed the year row to column for better analysis of the measures.

| | Column J | | | | | | | | | | | | | |
|--------------|-------------|-----|-----|------|------|----|-------------|------|------|------|------|-------------------------|-------------------------|-------------------|
| | Fact Review | | n+ | | | | No Of Seens | | | | | Total Fact Review Count | Total No Of Seens | |
| Row Labels ▼ | | | | 2016 | 2017 | | | 2014 | 2015 | 2016 | 2017 | | Total ruct Neview Count | Total No of Seems |

4. SSRS Reports

Report with a matrix

- 1. In report builder ,I created a data source connection to 'HotelReviewDataWarehouse' which is embedded to the report.
- 2. Then I created a data set using the following SQL query.

```
SELECT
  DimDate.[Date]
  ,DimDate.[Month]
  ,DimDate.[Year]
  ,DimHotel.city
  ,DimHotel.country
  ,DimHotel.province
  ,DimHotel.name
  ,DimHotel.categories
  ,DimHotel.primaryCategories
  ,DimReviewer.reviews#userProvince
  ,DimReviewer.reviews#userCity
  ,FactReview.reviews#rating
  ,FactReview.[commision#$]
  ,FactReview.noOfSeens
FROM
  DimDate
  INNER JOIN FactReview
    ON DimDate.DateKey = FactReview.ReviewDateKey
  INNER JOIN DimHotel
    ON DimHotel.SK hotel = FactReview.HotelKey
  INNER JOIN DimReviewer
    ON DimReviewer.SK_Reviewer = FactReview.ReviewerKey
```

The following matrix report demonstrates province wise average review rating and view count for years (2015-2018); year demonstrates in columns and province in rows.

| | | | | | | | Total | | | |
|----------|--|-------------|---|-------------|--|-------------|---|-------------|---|-------------|

Paramiterized report

1. Initially I created a new data set from following SQL query.

```
SELECT
  DimDate.[Date]
  ,DimDate.[Month]
  ,DimDate.[Year]
  ,DimHotel.city
  ,DimHotel.country
  ,DimHotel.province
  ,DimHotel.name
  ,DimHotel.categories
  ,DimHotel.primaryCategories
  ,DimReviewer.reviews#userProvince
  ,DimReviewer.reviews#userCity
  ,FactReview.reviews#rating
  ,FactReview.[commision#$]
  ,FactReview.noOfSeens
FROM
  DimDate
  INNER JOIN FactReview
    ON DimDate.DateKey = FactReview.ReviewDateKey
  INNER JOIN DimHotel
    ON DimHotel.SK hotel = FactReview.HotelKey
  INNER JOIN DimReviewer
    ON DimReviewer.SK Reviewer = FactReview.ReviewerKey
where DimHotel.name in (@Hotel)
```

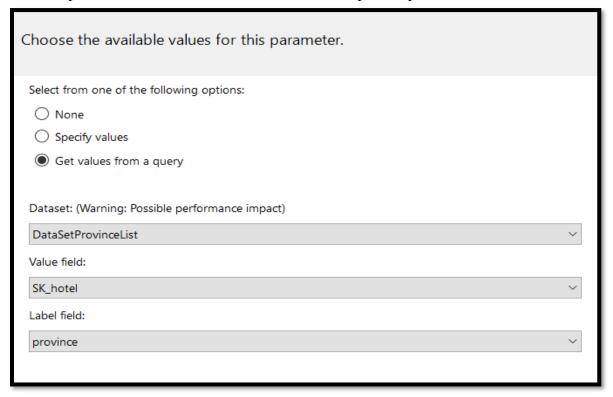

2. Then I added a new data set for Province details.

```
SELECT
DimHotel.SK_hotel
,DimHotel.alternate_hotel_id
,DimHotel.province
FROM
DimHotel
```

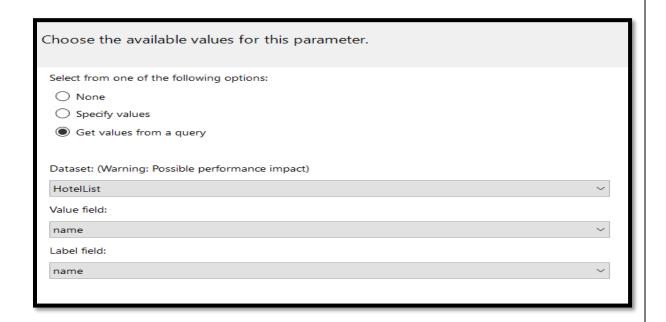

3. Next I added a data set for Hotel details.

```
SELECT
DimHotel.SK_hotel
,DimHotel.alternate_hotel_id
,DimHotel.province
,DimHotel.name
FROM
DimHotel
where DimHotel.SK_hotel in (@Province)
```

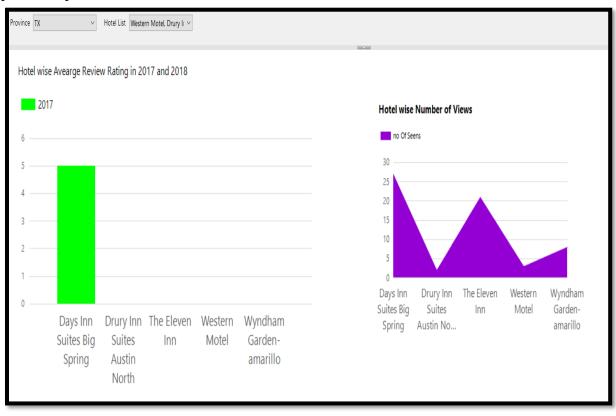

4. I added a parameter for Province list as follows to accept multiple values.

5. Then I added a parameter for Hotel list as follows to accept multiple values.

Following report consists of a bar char for hotel wise average rating for 2017 and 2018 and an area graph for hotel wise views when province and hotel names are passed as parameters.

Drill-down report.

1. Initially I created a new data set from following SQL query.

```
SELECT
 DimDate.[Date]
  ,DimDate.[Month]
  ,DimDate.[Year]
  ,DimHotel.city
  ,DimHotel.country
  ,DimHotel.province
  ,DimHotel.name
  ,DimHotel.categories
  ,DimHotel.primaryCategories
  ,DimReviewer.reviews#userProvince
  ,DimReviewer.reviews#userCity
  ,FactReview.reviews#rating
  ,FactReview.[commision#$]
  ,FactReview.noOfSeens
FROM
 DimDate
 INNER JOIN FactReview
   ON DimDate.DateKey = FactReview.ReviewDateKey
  INNER JOIN DimHotel
   ON DimHotel.SK hotel = FactReview.HotelKey
  INNER JOIN DimReviewer
   ON DimReviewer.SK Reviewer = FactReview.ReviewerKey
```

Following report depicts hotel wise average review rating and view count which is drilled down from province for 2015-2018.

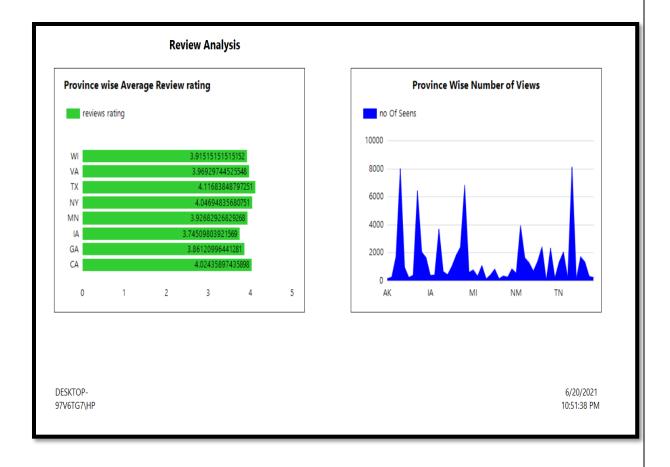

| Province wise I | Hotel Review De | tails between 20 |)15 -2018 | | | | | | | | |

Drill-through report.

1. Initially I created a new data set from following SQL query for the level 1 report.

```
SELECT
  DimDate.[Date]
  ,DimDate.[Year]
  ,DimDate.[Month]
  ,DimHotel.SK hotel
  ,DimHotel.alternate hotel id
  ,DimHotel.categories
  ,DimHotel.primaryCategories
  ,DimHotel.name
  ,DimHotel.city
  ,DimHotel.country
  ,DimHotel.province
  ,DimReviewDetails.reviews#title
  ,DimReviewDetails.reviews#text
  ,DimReviewer.reviews#username
  ,DimReviewer.reviews#userProvince
  ,DimReviewer.reviews#userCity
  ,FactReview.noOfSeens
  ,FactReview.[commision#$]
  ,FactReview.reviews#rating
FROM
  DimDate
  INNER JOIN FactReview
   ON DimDate.DateKey = FactReview.ReviewDateKey
  INNER JOIN DimHotel
   ON DimHotel.SK hotel = FactReview.HotelKey
  INNER JOIN DimReviewDetails
    ON DimReviewDetails.SK ReviewDetails = FactReview.ReviewDetailsKey
  INNER JOIN DimReviewer
    ON DimReviewer.SK_Reviewer = FactReview.ReviewerKey
```

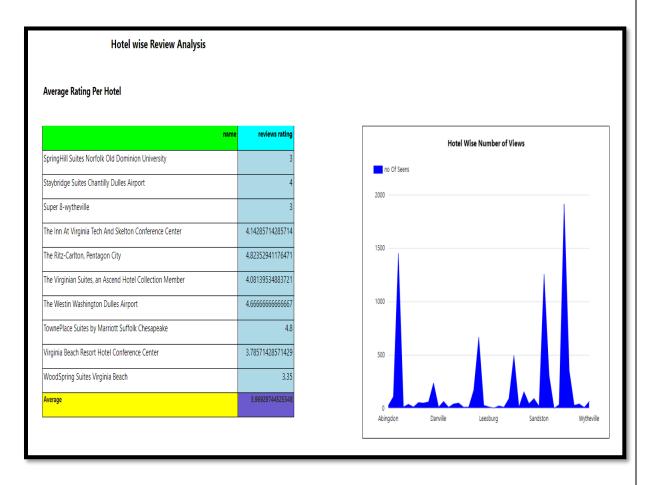

2. Then I created the following report with a bar chart to depict province wise average rating and an area graph to depict province wise view count.

3. I created a data set from following SQL query for the level 2 report.

```
DimDate.[Date]
  ,DimDate.[Year]
  ,DimDate.[Month]
  ,DimHotel.SK_hotel
  ,DimHotel.alternate_hotel_id
  ,DimHotel.categories
  ,DimHotel.primaryCategories
  ,DimHotel.name
  ,DimHotel.city
  ,DimHotel.country
  ,DimHotel.province
  ,DimReviewDetails.reviews#title
  ,DimReviewDetails.reviews#text
  ,DimReviewer.reviews#username
  ,DimReviewer.reviews#userProvince
  ,DimReviewer.reviews#userCity
  ,FactReview.noOfSeens
  ,FactReview.[commision#$]
  ,FactReview.reviews#rating
FROM
 DimDate
  INNER JOIN FactReview
   ON DimDate.DateKey = FactReview.ReviewDateKey
 INNER JOIN DimHotel
   ON DimHotel.SK_hotel = FactReview.HotelKey
  INNER JOIN DimReviewDetails
    ON DimReviewDetails.SK_ReviewDetails = FactReview.ReviewDetailsKey
  INNER JOIN DimReviewer
    ON DimReviewer.SK_Reviewer = FactReview.ReviewerKey
where @ProvinceList = DimHotel.province
```

The following level 2 report demonstrates the hotel wise average rating and hotel wise view counts in an area graph.

4. Then I created a parameter for the provinces.

5. Finally, I added an action in the level 1 report to navigate to the level 2 report as follows;
